JUBILANT LIFESCIENCES

JLL/EHS/ENV/2019/134

September 23, 2019

To,
The Member Secretary
UP Pollution Control Board,
TC – 12 V, Vibhuti Khand,
Gomti Nagar,
Lucknow – 226010, U.P.

Subject : Environmental Statement (Form V) for Jubilant Life Sciences Limited, Gajraula, Amroha, U.P.

Dear Sir,

Please find enclosed herewith Environmental Statement in Form V for FY 2018-19 for Jubilant Life Sciences Limited, Gajraula.

We assure you of our commitment for the compliance of statutory requirements all the times.

Thanking you,
Yours faithfully,
For **Jubilant Life Sciences Limited,**

(Authorized Signatory)
Radheshyam Singh
Site Head

Form V
(See Rule 14)

Environmental Statement for the financial year ending the 31st March 2019

Part A

Name & address of the owner/occupier of the industry operation or process	Mr. Radheshyam Singh Vice President – Operations & Site Head Jubilant Life Sciences Limited, Bhartiagram,Gajraula, District- Amroha (UP)
Production Capacity Units	Enclosed as **Annexure 1**
Year of Establishment	1982
Date of Last Environment Statement submitted	September 25, 2018

Part B

Water and Raw material Consumption

i. Water Consumption in m^3/day

Process	4051
Cooling	1917
Domestic	656

Name of the products	Process Water Consumption per Unit of product (m^3/MT)	
	During previous Financial year	During current Financial year
Ethyl Alcohol	5.0	4.924
Carbon Dioxide	9.0	7.22
Acetaldehyde	0.06	0.05
Acetic Acid	Not manufactured	Not manufactured
Acetic Anhydride	0.43	0.42
Pyridine & Picoline – 1&2	0.26	0.13
Cyanopyridine	0.45	-
Formaldehyde	0.20	0.22

Raw Material Consumption

Name of Raw material	Name of Products	Consumption of Raw Material per unit of Output (MT/MT)	
		During previous Financial	During current Financial year
Molasses	**Alcohol (KBL)**	4.131	4.384
Alcohol	**Acetaldehyde**	1.065	1.065
Ethyl Alcohol	**Ethyl Acetate**	0.726	0.723
Methanol	**Formaldehyde**	0.429	0.430
Ammonia	**Pyridine and Picoline 1&2**	0.405	0.404
Ammonia	**3 Cyano pyridine**	0.510	0.510
Ammonia	**4 Cyano pyridine**	-	0.586

Part C

Pollution discharged to Environment/unit of output
(Parameter as specified in the consent issued)

Pollutants	Unit	Concentration of Pollutants discharged (mass/volume)	% of variation from prescribed standards with reasons
Water	Distillery Unit	Effluent treated through Biomethanation followed by RO . Reject from RO sent for further concentration in MEE and finally utilized for composting / Slop Incineration. Permeate from RO plant and Condensate from MEE utilized back in process and cooling tower make up. **No discharge from Distillery Unit and complete Zero Liquid Discharge status is being maintained.**	Well within prescribed norms of UPPCB
	Chemical Unit I	Effluent treated in CETP and utilised in horticulture / cooling tower makeup. **No discharge and complete Zero Liquid Discharge status is being maintained.** Treated effluent analysis report attached as **Annexure - 2.**	
	Chemical Unit II	Organic effluent : Concentrated in MEEs and incinerated in Liquid waste incinerators. Inorganic effluent : Treated in ATFD or spray dried through spray driers and dried solids disposed in captive SLF. **No discharge and complete Zero Liquid Discharge status is being maintained.**	
	Power plant	Utility effluent from WTP and Cooling towers treated in RO and RO reject is utilized for wet ash handling system / MEE feed /spray drying. Clean permeate utilized back for make up in cooling towers thus **No discharge and complete Zero Liquid Discharge status is being maintained.**	

Air emission	FBC Boiler 90 TPH - 1 + 90 TPH - 2 (Stack common)	SPM - 37.17 mg/Nm^3 (Average value for FY 18-19 stack monitoring)	Well within prescribed norms of UPPCB
	Liquid Waste Incinerator I	SPM - 32.80 mg/Nm^3 (Average value for FY 18-19 stack monitoring)	
	Liquid Waste Incinerator II	SPM - 36.0 mg/Nm^3 (Average value for FY 18-19 stack monitoring)	
	Liquid Waste Incinerators III	SPM - 35.5 mg/Nm^3 (Average value for FY 18-19 stack monitoring)	
	Solid Waste Incinerator	Not in operation as Solid hazardous waste is sent for incineration at common waste incineration facility ie: M/s Bharat Oil waste & Management , Kanpur. (an agency approved by MoEF&CC and SPCB).	
	Thermal Oxidiser -I	SPM - 33.0 mg/Nm^3 (Average value for FY 18-19 stack monitoring)	
	Thermal Oxidiser -II	SPM - 33.33 mg/Nm^3 (Average value for FY 18-19 stack monitoring)	
	Slop Fired Boiler	SPM - 76.83 mg/Nm^3 (Average value for FY 18-19 stack monitoring)	

Part D

Hazardous Wastes

[As specified under Hazardous Waste (Management and Handling) Rules, 2016]

Hazardous Waste	**Total Quantity disposed (MT)**		
	Name of the process waste	**During previous Financial Year**	**During Current Financial Year**
From Process	Acetic Acid Spent Catalyst	Product Not manufactured.	Product Not manufactured.
	Acetic Anhydride (AC2O) dopp kettle residue	36.15	19.86
	Ethyl Acetate (EA) dopp kettle residue	5.98	12.48
	3 CP kettle distillation residue	33.86	0.00
	Pyridine Spent catalyst	19.87	48.64
	Lutidine Nutch filter (Sod. Oxalate)	0.0	0.0
	Pyridine derivative (Waste Charcoal/ Spent Carbon)	0.0	0.0
	Spent Resin	0.0	0.0
	Contaminated Polythene/drum/ packing material	166.21	182.67
	Distillation residue from Fine Chemical section	866.25	949.89
	Tank Sludge from all section of plants	-	149.50
	Discarded Chemicals – QC/Kilo/R&D Lab	-	0.65
	Inorganic Raffinate from Pyridine Deri.	-	2130.65
	Pyridine residue used in-house as Fuel	7446.24	4792.50
	$KMnO_4$ Sludge (CO_2 plant)	0.49	0.56
	Misc. Waste	2.07	9.47
	Spent Solvent	369.58	573.75
	Lube Oil/Used Oil	5.57	2.736
	e waste	0.155	0.022
From Pollution Control Facilities	Incinerated Ash	Nil	Nil
	Spray Dried Solids	717.59	692.44
	CETP Sludge	1.86	1.73
	CTRO silica sludge	15.00	14.03

Part E

Solid Wastes

Solid Waste	Total Quantity Disposed (MT)	
	During last financial year	During current financial year
Fly Ash	98186	81051

Part F

Please specify the characteristics (in terms of concentration and quantum) of hazardous as well as solid wastes and indicate disposal practice adopted for both these categories of wastes.

Name of the process waste	Disposal Method
Acetic Acid (Spent catalyst)	Product Not manufactured during FY 2018-19
Acetic Anhydride (AC2O) dopp kettle residue	Captive Incineration / Co-incineration / Co-processing - at authorized agency/ Incineration at common waste incineration facility.
Ethyl Acetate (EA) dopp kettle residue	
3 CP kettle distillation residue	
Pyridine Spent catalyst	
Distillation residue from Pyridine & pyridine derivatives	
Pyridine derivative (Waste Charcoal/Spent Carbon)	
Discarded chemicals- – QC/Kilo/R&D Lab	
Tank Sludge from all section of plants	
Spent Resin	
Contaminated Polythene/drum/ packing material	
Inorganic Raffinate from Pyridine Deri.	Captive incineration(spray drying) /MEE/ATFD/ Co incineration / Co processing at authorized agency / Incineration at common waste incineration facility.
Pyridine residue used in-house as Fuel	Used in-house as support fuel in incinerators
$KMnO_4$ Sludge (CO_2 plant)	Disposed in Captive secured landfill (SLF)
Incinerated Ash	
Spray Dried Solids	
CETP Chemical Sludge	
Silica sludge from Cooling Tower RO plant	
Misc. Waste (Asbestos gaskets & other Asbestos containing material)	
Catalyst from ATFE Condenser (from JACPL)	
Asbestos gaskets & other Asbestos containing material from JACPL)	
Spent Catalyst (from JACPL)	
Asbestos gaskets & other Asbestos containing material (from JACPL)	
Spent Solvent	Sold to authorized Reprocessor / Recycler/ Buyer
Pyridine Spent catalyst	
Used oil	
e-waste	Sold to authorized recycler
Fly Ash	Sold to cement industry and partly disposed in ash pond.

For quantity please refer **PART D**. Characteristices of waste is attached as **Annexure – 3**

Part G

Impact of pollution control measures taken on conservation of natural resources and consequently on the cost of production.

The following actions are some of the significant steps taken during past years for conservation of raw water and reduction of effluent:

Detail	Total qty (M3 per day max.) at full capacity
Saving in raw water by utilising RO permeate in distillery unit for molasses dilution and other purposes .	344
Utilisation of treated effluent of CETP in cooling tower make up/horticulture	149
Utilization of MEE condensate after Distillery effluent treatment.	388
Utilisation of treated sewage water in horticulture	247
Utilisation of Spent Leese for fermenter washing	80
Utilisation of Spent Leese for molasses dilution	33
Utilisation of Clean condensate of MEE(raffinate treatment) from in Cooling tower make up	256
Total	1497

Effluent Reduction :

Effluent generated from Pyridine & Picoline II reduced from 2.538 KL/MT to 2.300 KL/MT by adoption of dry vacuum pump in place of steam ejector.

Waste Reduction :

- Reduction in organic Raffinate norms in FC-1 Plant from 525 KL/Month to 275 KL/Month
- Reduction in Inorganic Raffinate norms from 8.0 KL/MT to 6.0 KL/MT and Organic Raffinate norms from 6.13 Lt/Kg to 3.113 Lt/Kg in 4DMAP Plant

Energy Conservation

Jubilant recognises energy as the most precious resource and has been the precursor of the Indian Chemical Industry in energy conservation efforts. Following are the major energy conservation efforts implemented by the company in FY 2018-19:

1. Power consumption norm reduced in Acetaldehyde - 7 plant from 110 to 97 KWH/MT.
2. Power consumption norm reduced in Acetic Anhydride plant from 345 to 278 KWH/MT.

3. Power consumption norm reduced in Slop MEE plant from 26.69 to 20.80 KWH/MT.
4. Steam consumption reduced in Pyridine and Picoline plant – 1 from 12.32 MT/MT to 10.69 MT/MT
5. Steam consumption reduced in Acetaldehyde - 7 plant from 1.220 to 1.150 MT/MT.

Air Pollution Management

JLL has taken following measures for controlling the air pollution:

- **Odour Management**

There will not be any specific source of air emission however, because of the nature of raw materials and processes involved, there are potential for various types of air emission from the process equipment mainly vents of the reactors and storage tanks. Depending on the type and nature of emission, the following approach has been adopted for minimising odour emissions from the proposed plant:

a) Major Odourous Vents

Pyridine recovery vents are connected to 2 No's Thermal oxidizer where the vent gasses are incinerated. The flue gasses are then passed through a Waste Heat Recovery Boiler is then wherein steam is generated to the tune of 4 TPH.

b) Other Odourous vents

Minimise emission by nitrogen blanketing / chilled water condenser/ scrubbing system in Pyridine storage tanks. (Effluent generated from scrubber will be recycled in the process)

c) Mildly Odourous vents

Provision for demister / knock out pots / chilled water condenser / scrubbing system in the vents. (Effluent generated from scrubber will be recycled in the process).

d) Mildly odourous tankages vents

Provision for breather valves / condensers.

e) Fugitive emissions

- Condenser height reduced from 33 to 24 /27 to improve cooling water circulation system in order to prevent fugitive emissions into atmosphere.
- Scrubber capacity enhanced in 4DMAP plant to prevent fugitive emission into atmosphere.
- Cold trap provided before hot well during toluene distillation to prevent toluene exposure into atmosphere.
- Bund walls to restrict occasional leakages / accidental spillages.
- State of the art double mechanical seal pumps for material transfer.

Schematics of vent chiller / condenser & nitrogen blanketing is enclosed for reference

Chiller to reduce the emission so as to reduce vent losses from the tank

PRV for Nitrogen Blanketing

SRV for N2 Blanketing

Breather Valve

NITROGEN BLANKETING SYSTEM ON STORAGE TANKS

Chiller attached to vent of fresh pyridine Storage tank at CPC plant.

CO_2 emission from fermentation house

JLL has installed CO_2 recovery plant where CO_2 emitted during fermentation is collected, washed, purified and made suitable for food grade consumption.

The CO_2 collected and washed with water and potassium permanganate and compressed. The CO_2 is further treated with activated carbon to avoid measure odour. The unique feature of CO_2 recovery plant is distillation of liquid CO_2 so as to remove the traces of impurities and make it suitable for food grade. It may be noted that JLL is major supplier of CO_2 to M/s Coca Cola and Pepsi in Northern India.

We have also installed Continuous Online Emission Monitoring System for 24x7 hrs monitoring.

In additions to this VOC detector has been installed at main gate to detect VOC levels in ambient air.

Dust Suppression

We have developed three layers of tree plantation near boundary walls.

Now as a additional effort towards dust suppression , we have installed fixed sprinkler system across the railway line during loading and unloading of coal.

We have started spraying water with mobile tanker on plant periphery for dust suppression.

OTHER FACILITIES FOR POLLUTION CONTROL

SECURED LANDFILL

JLL is committed for safe, systematic and scientific waste management techniques. In order to dispose the hazardous wastes such as incinerated ash and spray dried solids etc. in safe and scientific way, JLL has developed a Secured Landfill (SLF) first in U.P of capacity 11,000 MT (first cell) for captive use . The design of the landfill is given by National Productivity Council & is as per the CPCB guidelines.

ASH POND

The ash pond is located around 2.2 km west of the existing plant, an area of 35 acres with a total capacity of around 7.1 lac cubic meter. The ash pond has been developed in two phases. The existing pond of 3.5 lac cubic meter is currently being used to store the ash generated and is about to fill and construction of second ash pond has already started.

Part H

Additional measures/ investment proposal for environmental protection including abatement of pollution.

During FY 2018-19 following initiatives were taken for environment protection through reduction in norms and indirectly reducing environment load.

1. Power consumption norm reduced in Acetaldehyde - 7 plant from 110 to 97 KWH/MT.
2. Power consumption norm reduced in Acetic Anhydride plant from 345 to 278 KWH/MT.
3. Power consumption norm reduced in Slop MEE plant from 26.69 to 20.80 KWH/MT.
4. Steam consumption reduced in Pyridine and Picoline plant – 1 from 12.32 MT/MT to 10.69 MT/MT
5. Reduction in KMnO4 norms from 1.50 MT/m3 to 1.20 MT/m3 in CO2 Plant.
6. Reduction in organic Raffinate norms in FC-1 Plant from 525 KL/Month to 275 KL/Month
7. Reduction in Inorganic Raffinate norms from 8.0 KL/MT to 6.0 KL/MT and Organic Raffinate norms from 6.13 Lt/Kg to 3.113 Lt/Kg in 4DMAP Plant
8. Reduction in Effluent generation norms in Pyridine & Picoline -1 process from 2.538 to 2.300 KL/MT
9. Reduction in Effluent generation norms in Acetaldehyde plant process from 2.85 to 2.50 MT/MT
10. Reduction in Effluent generation norms in 3-CP Plant process from 2.606 to 1.551 KL/MT

Part I

Any other particulars in respect of Environmental protection and abatement of pollution.

Greenery development Program:

An afforestation programme at Jubilant Life Sciences Limited is a on going continual activity to provide green cover in and around company area. to “Freshen Up” the surrounding environment.
Thousands of saplings planted every year are growing into trees, providing a canopy of Thick foliage all around the plant. Plant species include :

1. Pilkhan (Ficus virens)
2. Chitvan (Alstonia scholaris)
3. Jamun (Syzygium cumini)
4. Kadam (Neolamarckia cadamba)
5. Neem (Azadirachta indica)
6. Ficus (Ficus benjamina)

During FY 2018-2019, approx.. 8000 nos. saplings were planted.

Tree plantation done at Govt. school with UPPCB-Bijnor officials on World Environment Day

Health – Swasthya Prahari

JBF entertained a case in which the children was severely malnourished and when the JBF team visited the household they found that the malnourished boy was the fifth number child and before him there were four girl child. The mother thought that this time also the baby born would be a girl child that's why the guardian didn't take care about the delivery and the result was that the born child was a boy, even the mother didn't took proper immunization during pregnancy. And now, when the born child is a boy that's why they are more concerned about his health. JBF immediately referred the malnourished boy to NRC (Nutritional Rehabilitation Centre). In NRC, the treatment of child was done till fourteen days. After that, the child became normal. In this way, JBF is addressing the malnourished children in the project villages.
